## 1.0 Introduction

In accordance with the Georgia Environmental Protection Division (GA EPD) Rules of Solid Waste Management 391-3-4-.10(6)(a)-(c) and 391-3-4-.14, Atlantic Coast Consulting, Inc. (ACC) has prepared this *2019 Second Semiannual Groundwater Monitoring and Corrective Action Report* to document groundwater monitoring activities conducted during the second half of 2019 at Georgia Power Company's (GPC) Grumman Road Private Industrial Landfill (GRL). To specify groundwater monitoring requirements, GA EPD rule 391-3-4-.10(6)(a) incorporates by reference the United States Environmental Protection Agency (US EPA) Coal Combustion Residuals (CCR) Rule 40 Code of Federal Regulations (CFR) § 257 Subpart D.

To comply with GA EPD's 391-3-4-.10, a permit application package for GRL was submitted to GA EPD in November 2018 and is currently under review. To meet the requirements of 391-3-4-.10(6), Appendix III and IV parameters listed in 40 CFR § 257 were incorporated into the routine groundwater monitoring program through a minor modification in August 2017. The facility is continuing an Assessment of Corrective Measures (ACM) established under the existing EPD Permit No. 025-061D(LI). Semiannual reporting is completed pursuant to 391-3-4-.10(6)(c). This report documents the two monitoring events conducted during the second half of 2019: (1) an initial assessment monitoring event for Appendix IV constituents in August 2019 as a result of statistical exceedances of Appendix III parameters during the first detection monitoring event, and (2) the subsequent assessment event conducted in October 2019 for Appendix I and II metals required by the existing state permit, Appendix III, and Appendix IV parameters detected during the August 2019 monitoring event.

### 1.1 Site Description and Background

GRL is located on Gulfstream Road, in Chatham County, Georgia, approximately 0.8 miles east of Savannah/Hilton Head International Airport and 1.3 miles west of the city of Port Wentworth. GRL occupies approximately 36 acres. The Site ceased accepting CCR prior to October 19, 2015 and is therefore not subject to Federal monitoring requirements. GRL received CCR from GPC – Plant Kraft and operated under EPD solid waste handling permit number 025-061D(LI). GRL is comprised of four cells or parcels: Parcel A [originally operated under permit number 025-034D(LI)], B1, B2, and B3. Closure of parcels B1, B2, and B3 was completed after CCR disposal ceased. Capping of the last remaining uncapped portion of Parcel A has recently been completed and was documented to EPD in a submittal dated November 27, 2019.

Figure 1, Site Location Map, depicts the Site location relative to the surrounding area. Figure 2, Well Location Map, depicts the general configuration of the Site and the location of the monitoring wells.

### 1.2 Regional Geology and Hydrogeologic Setting

GRL is underlain by Atlantic Coastal Plain Physiographic Province strata consisting of unconsolidated to consolidated layers of sand, silt and clay and semi-consolidated to dense layers of limestone and dolomite. (Clarke et al, 2010). These sediments constitute three major aquifer systems, which are, from shallow to deep, the surficial aquifer system, the Brunswick aquifer system, and the Floridan aquifer system. In the Atlantic Coastal Plain, the surficial aquifer system consists of Miocene and younger interlayered sand, silt, clay and thin limestone beds (Clarke et al, 2010). The surficial aquifer system is unconfined and the fine silty sands and clay partings are found generally less than 80 feet below ground surface (bgs).

The surficial aquifer is underlain by a confining unit that separates it from the Brunswick aquifer. The confining unit consists of silty clay and dense thin, phosphatic Miocene limestone. The Oligocene to Miocene Brunswick aquifer consists of two water-bearing zones. The upper Brunswick and lower Brunswick aquifers are separated by a low permeability, sandy phosphatic clay confining unit. The Brunswick aquifer is separated from the Upper Floridan aquifer with the Upper Confining unit and a non-water bearing limestone (NWBL) layer. The Floridan aquifer is confined by the overlying clay and NWBL layers.

### 1.3 Site Geology and Hydrogeologic Setting

A subsurface characterization study at the Site identified two distinct units in the shallow subsurface (SCS, 1998). Unit 1 comprises the uppermost aquifer has a thickness ranging from approximately 22 feet to 28 feet across the Site. Hydraulic conductivity is defined as the rate at which water can move through a permeable medium. In situ rising head and falling slug tests were performed at multiple locations on the Site. There is a limited range in hydraulic conductivity at these locations, indicating a fairly uniform medium across the upper aquifer or Unit 1 (typically range from  $10^{-3}$  to  $10^{-4}$  centimeters per second [cm/sec]). The average hydraulic conductivity is estimated at  $2.7 \times 10^{-3}$  cm/sec (7.6 feet/day). The values from the field test fall within the standard range of hydraulic conductivity values associated with a silty sand.

Unit 2 directly underlies Unit 1 and is comprised of fine grain sandy silt and clayey sands. Typically, Unit 2 has a lower permeability on the order of 10 times less ( $10^{-4}$  to  $10^{-5}$  cm/sec) than that of Unit 1 and is considered an aquitard. The thickness of Unit 2 in the Site area ranges from 5 feet to over 40 feet.

### 1.4 Groundwater Monitoring System and CCR Units

A groundwater monitoring plan was submitted and approved January 13, 2000. The initial approved detection groundwater monitoring network included 17 monitoring wells: upgradient wells GWA-7 and GWA-8 and downgradient wells GWC-1 through GWC-6 and GWC-9 through GWC-17. As previously documented to EPD, in late 2018, three monitoring wells (GWC-4, GWC-5, and GWC-6) were replaced by new monitoring wells (GWB-4R, GWB-5R, and GWB-6R) and were also re-designated as side-gradient (i.e. "GWB" prefixes) locations. One well (GWC-3) was not replaced due to redundancy with GWC-20. These changes are detailed in the November 2018 permit application. Well installations have either been previously approved or pending permit application. Pursuant to § 257.91, the monitoring system is designed to monitor groundwater passing the waste boundary of GRL within the uppermost aquifer. Wells were located to serve as upgradient and downgradient monitoring points based on groundwater flow direction (Table 1A, Monitoring Network Well Summary). Existing locations not included in the monitoring network are presented in Table 1B, Non-Network Well Summary.

## 2.0 GROUNDWATER MONITORING ACTIVITIES

The following describes monitoring-related activities performed at the Site during the second half of 2019. Samples were collected from each well in the monitoring system shown on Figure 2.

Based on results of the *Supplemental 2019 First Semiannual Groundwater Monitoring Report*, assessment monitoring was initiated under 391-3-4-.10(6). Table 2, Groundwater Sampling Event Summary, presents a summary of groundwater sampling events completed at the Site during the second half of 2019. Groundwater events were conducted at the Site during August and October 2019. During the initial Appendix IV assessment monitoring event completed in

August 2019, groundwater samples were collected and analyzed for the full suite of Appendix IV constituents to meet the requirements of § 257.95(b). During the October semiannual (assessment) sampling event, groundwater samples were collected for the state-specific list of Appendix I and II metals specified in the permit, all Appendix III constituents, and the Appendix IV constituents detected during the August event. Results of sampling activities conducted in the second half of 2019 are presented in Appendix A, Laboratory Analytical and Field Sampling Reports.

## 2.1 Monitoring Well Installation/Maintenance

Monitoring well-related activities were limited to visual inspection of well conditions prior to sampling, recording the Site conditions, and performing exterior maintenance to provide safe access for sampling. Due to construction activities, well GWC-2 required repairs and redevelopment, which occurred in July 2019. A resurvey of the top of casing will be completed in 2020, prior to the annual report.

## 2.2 Assessment Monitoring Program

Based on results presented in the *Supplemental 2019 First Semiannual Groundwater Monitoring Report*, GPC initiated an assessment monitoring program for CCR Appendix IV constituents. The facility had previously implemented an assessment monitoring program for Appendix I metals included in its state permit. A summary of the analytes required by Appendix III, Appendix IV, and the existing permit is provided in Table 3, Summary of Groundwater Monitoring Parameters.

An assessment of corrective measures (ACM) to address arsenic concentrations in several monitoring locations in the vicinity of Parcel A under the state permit is ongoing and will continue to be documented to EPD.

## 3.0 SAMPLE METHODOLOGY AND ANALYSIS

The following sections describe the methods used to conduct groundwater monitoring at the Site.

### 3.1 Groundwater Flow Direction, Gradient, and Velocity

Prior to each sampling event, groundwater elevations are recorded from the certified well network and piezometers at GRL. Groundwater elevations recorded during the monitoring events are summarized in Tables 4A and 4B, Summary of Groundwater Elevations – August 2019 and October 2019, respectively. Groundwater elevation data was used to develop Figure 3, October 2019 Potentiometric Surface Map, a potentiometric high exists near wells GWA-7 in the northern portion of the Site and groundwater flows semi-radially from this high. In the southern portion of the Site groundwater flows to the south and southeast. The groundwater flow patterns observed during the October 2019 monitoring event is consistent with historical patterns.

The groundwater flow velocity at Plant Yates was calculated using a derivation of Darcy's Law.

Specifically:

Equation

$$v = \frac{K ( dh/dl )}{P_e} \quad \text{where:} \quad v = \text{ground water velocity}$$

K = hydraulic conductivity

dh/dl = hydraulic gradient

$$P_e = \text{effective porosity}$$

Groundwater flow velocities were calculated for the Site based on hydraulic gradients, average hydraulic conductivity based on previous slug test data, and an estimated effective porosity of 0.20 (based on a review of several sources, including Driscoll, 1986; US EPA, 1989; Freeze and Cherry, 1979). Groundwater flow velocities have been calculated and are tabulated on Table 5, Groundwater Flow Velocity Calculations. The calculated maximum flow velocity is 0.29 feet per day.

### 3.2 Groundwater Sampling

Groundwater samples were collected using low-flow sampling procedures in accordance with 40 CFR § 257.93(a). Purgging and sampling was primarily performed using peristaltic pumps. Tubing was lowered into the well so that the intake was at the midpoint of the well screen (or as appropriate determined by the water level). Peristaltic pump samples were collected using new disposable polyethylene tubing. All non-disposable equipment was decontaminated before use and between well locations.

Monitoring wells were purged and sampled using low-flow sampling procedures. A SmarTroll (In-Situ field instrument) was used to monitor and record field water quality parameters (pH, conductivity, oxidation-reduction potential, dissolved oxygen, and temperature) during well purging prior to sampling. Turbidity was measured using a Hach 2100Q portable turbidimeter. Groundwater samples were collected when the following stabilization criteria were met:

- $\pm 0.1$  standard units for pH
- $\pm 10\%$  for specific conductance
- $\pm 10\%$  for dissolved oxygen (DO) where  $DO > 0.5$  milligrams per liter (mg/L). No criterion applies if  $DO < 0.5$  mg/L.
- Turbidity measurements less than 10 nephelometric turbidity units (NTU)

Once stabilization was achieved, samples were collected directly into appropriately preserved laboratory-supplied sample containers. Sample bottles were placed in ice-packed coolers and submitted to Pace Analytical Services, LLC (Pace) of Peachtree Corners, Georgia and Greensburg, Pennsylvania following chain-of-custody protocol. Stabilization logs for each well during each monitoring event are included in Appendix A.

### 3.3 Laboratory Analyses

Groundwater samples were collected during two groundwater monitoring events in the second half of 2019. Mercury was not detected in the initial assessment Appendix IV assessment monitoring event completed in August 2019 and therefore not included in the semiannual monitoring event completed in October 2019. Analytical methods used for groundwater monitoring parameters are provided in laboratory reports in Appendix A. Analytical data collected in monitoring events from the second half of 2019 (August 2019 and October 2019) are summarized in Table 6A, Summary of Groundwater Analytical Data – August 2019, and Table 6B, Summary of Groundwater Analytical Data – October 2019, respectively.

Laboratory analyses were performed by Pace. Pace is accredited by the National Environmental Laboratory Accreditation Program (NELAP) and maintains a NELAP certification for all parameters analyzed for this project. In addition, Pace is certified to perform analysis by the State of Georgia. Laboratory reports and chain-of-custody records for the monitoring events are presented in Appendix A.

### 3.4 Quality Assurance and Quality Control

During each sampling event, quality assurance/quality control (QA/QC) samples are collected at a rate of one QA/QC sample per every 10 groundwater assessment samples. Equipment blanks (where non-dedicated sampling equipment is used) and duplicate samples were collected during each sampling event. QA/QC sample data were evaluated during data validation and are included in Appendix A.

Groundwater quality data in this report was validated in accordance with US EPA guidance (US EPA, 2011) and the analytical methods. Data validation generally consisted of reviewing sample integrity, holding times, laboratory method blanks, laboratory control samples, matrix spikes/matrix spike duplicate recoveries and relative percent differences, post digestions spikes, laboratory and field duplicate relative percent differences (RPDs), field and equipment blanks, and reporting limits. Where appropriate, validation qualifiers and flags are applied to the data using US EPA procedures as guidance (US EPA, 2017).

Values followed by a "J" flag indicate that the value is an estimated analyte concentration detected between the method detection limit (MDL) and the laboratory reporting limit (PQL). The estimated value is positively identified but is below the lowest level that can be reliably achieved within specified limits of precision and accuracy under routine laboratory operating conditions. "J" flagged data are used to establish background statistical limits but are not used when performing statistical analyses.

## 4.0 STATISTICAL ANALYSIS

Statistical analysis of groundwater monitoring data was performed on samples collected from the GA EPD-approved groundwater monitoring network and following the appropriate method. The statistical method used at the site was developed by Groundwater Stats Consulting, LLC (GSC), using methodology presented in *Statistical Analysis of Groundwater Data at RCRA Facilities, Unified Guidance*, March 2009, US EPA 530/R-09-007 (US EPA, 2009).

Pursuant to § 257.95(d)(2) GPC will establish groundwater protection standards for the Appendix IV monitoring parameters and complete statistical analysis of the Appendix IV groundwater monitoring data obtained during the October semiannual assessment monitoring event within 90 days of obtaining the results. GPC will complete the assessment monitoring and statistical analysis in accordance with § 257.95 and report the results in the Annual Groundwater Monitoring and Corrective Action Report, due August 1, 2020.

### 4.1 Statistical Methods

All screened historical background data through July 2018 were used to construct statistical limits for constituents analyzed by introwell methods, permit required Appendix I and II metals and a subset of Appendix III constituents. In the introwell method, data for all wells and constituents will be reevaluated when a minimum of 4 new data points are available to determine whether earlier concentrations are representative of present-day groundwater quality. For Appendix III constituents analyzed by interwell methods, newer upgradient background data are included following each event, if data are reviewed for outliers and trending data. Sanitas groundwater statistical software was used to perform the statistical analyses. Sanitas is a decision support software package that incorporates the statistical tests required of Subtitle C and D facilities by US EPA regulations.

#### 4.1.1 Appendix III Constituents

Statistical tests used to evaluate the groundwater monitoring data consist of interwell prediction limits combined with a 1-of-2 verification resample plan for Appendix III parameters calcium, chloride, fluoride, pH, and sulfate. Monitoring results for boron and Total Dissolved Solids (TDS) were evaluated using intrawell prediction limits combined with a 1-of-3 verification resample plan. If the most recent sample exceeds its relevant background statistical limit, an initial statistically significant increase (SSI) is identified. An independent resample or two resamples in the case of a 1-of-3 verification plan may be collected and evaluated within 90 days to determine whether the initial exceedance is verified. If resample results exceed the PL, the initial exceedance is verified, and an SSI is identified. When a resample result does not verify the initial result, and does not exceed the PL, there is no SSI. If resampling is not performed, the initial exceedance is a confirmed exceedance. A summary of the statistical methodology used at the Site for routine groundwater monitoring is provided in Table 7, Statistical Method Summary.

#### 4.1.2 Permit-Required Appendix I and II Metals

A permit minor modification was submitted to EPD following the *2019 First Supplemental Semiannual Groundwater Monitoring Report* to allow for intrawell methods to be used for evaluation of state metals. The statistical methodology was revised to an intrawell method following the June 2019 monitoring event. Statistical tests used to evaluate the groundwater monitoring data consist of intrawell prediction limits combined with a 1-of-2 verification resample plan for all required metals. Intrawell prediction limits are constructed from historical data within a given well through July 2018, and the most recent sample is compared to background. A 90 day 1-of-2 verification resampling plan is used for Appendix I and II metals. If resampling is not performed, the initial exceedance is a confirmed exceedance. Appendix I and II metals that are identified as SSIs are evaluated by trend tests. A summary of the statistical methodology used at the Site for routine groundwater monitoring is provided in Table 7.

### 4.2 Appendix III Statistical Analyses Results

Analytical data from the October 2019 monitoring event at the Site were statistically analyzed in accordance with the statistical methods. Resampling to confirm SSIs was not performed; therefore, initial SSIs are treated as verified. Wells and analytes with all data below the reporting limit do not require statistical analysis. A summary of wells exhibiting 100% non-detects is included in Appendix B, Statistical Analyses. The statistical analysis and comparison to prediction limits are included as Appendix B.

Based on review of the Appendix III statistical analyses presented in Appendix C, the following summarizes parameters exhibiting SSIs:

- Boron: GWB-6R, GWC-16
- Calcium: GWB-4R, GWC-1, GWC-11, GWC-12, GWC-14, GWC-15, GWC-16, GWC-17, GWC-20, GWC-21
- Chloride: GWC-17
- pH: GWC-15, GWC-20
- Sulfate: GWB-6R, GWC-11, GWC-12, GWC-14, GWC-16, GWC-17
- TDS: GWB-5R, GWB-6R, GWC-16

Appendix III constituents have not returned to background levels and assessment monitoring should continue pursuant to 40 CFR § 257.95(f).

#### **4.3 Appendix IV Statistical Analyses Results**

Pursuant to §257.95, Appendix IV groundwater quality data will be statistically analyzed and compared to groundwater protection standards within 90 days of receiving data from the first (October 2019) assessment monitoring event. GPC will complete the assessment monitoring and statistical analysis in accordance with § 257.95 and report the results in the Annual Groundwater Monitoring and Corrective Action Report, due August 1, 2020.

#### **4.4 Appendix I and II EPD Permit-Required Metals**

Analytes required by the existing state permit were analyzed during this event. Based on review of the Appendix I and II statistical analyses presented in Appendix B and previously identified results, the following summarizes parameters exhibiting SSIs:

- Arsenic: GWC-15, GWC-16, GWC-20
- Barium: GWC-16
- Selenium: GWC-15
- Zinc: GWC-13

The Appendix I and II SSIs were evaluated using the Sen's Slope/Mann-Kendall trend test, and no significant increasing trends were identified for the exceedances of barium at GWC-16, selenium at GWC-15, and zinc at GWC-13. Statistically significant increasing trends were identified for arsenic in GWC-15 and GWC-20. A statistically significant decreasing trend was identified for arsenic in GWC-16. Consistent with prior monitoring events, the concentrations of arsenic in GWC-15, GWC-16, and GWC-20 exceed the maximum contaminant level (MCL). Arsenic in wells GWC-15, GWC-16, and GWC-20 will continue to be addressed by the ongoing ACM.

### **5.0 MONITORING PROGRAM STATUS**

In accordance with GA EPD rule 391-3-4-.10(6)(a) and 40 CFR §257.94(e), the assessment monitoring program previously established under state permit requirements has been expanded to include Appendix IV constituents. An ongoing ACM to address arsenic concentrations in three wells was established under the state solid waste permit.

### **6.0 CONCLUSIONS AND FUTURE ACTIONS**

Statistical evaluations of the groundwater monitoring data identified SSIs of Appendix I and Appendix III groundwater monitoring constituents. GPC has initiated assessment monitoring pursuant to §257.95. During the first semiannual period of 2020, GPC will establish groundwater protection standards for Appendix IV constituents and complete statistical analysis of the assessment monitoring results according to the regulations. An ongoing assessment of corrective measures for arsenic was established under EPD Rule 391-3-4-.14 and will continue contemporaneously with implementation of the State CCR Rule. Results of the statistical analysis will be presented in the 2020 annual groundwater monitoring report on August 1, 2020.

The next monitoring event is planned for the first half of 2020 and will include sampling for Appendix III analytes and Appendix IV constituents detected during the August 2019 monitoring event as well as Appendix I and II constituents included in the permit.

3. \* - Resurvey Pending.

**Table 5**  
**Groundwater Flow Velocity Calculations**  
**October 2019**

Equation

$$v = \frac{K(i)}{P_e} \quad \text{where: } v = \text{ground water velocity}$$

K = hydraulic conductivity  
 $\frac{dh}{dl}$  = hydraulic gradient  
 $P_e$  = effective porosity

Values Used in Calculation

	Value	Source
K =	2.7E-03      cm/sec 7.60            ft/day	See note 1.
i <sub>1</sub> =	12.03/1576    ft/ft 0.008	hydraulic gradient from GWB-6R to GWC-16
i <sub>2</sub> =	2.99/737       ft/ft 0.004	hydraulic gradient from GWA-7 to GWC-17
P <sub>e</sub> =	0.20	See note 2.

$$v_{\max} = \frac{(7.60)(0.008)}{0.20} \quad v_{\max} = 0.29 \text{ ft/day}$$

$$v_{\min} = \frac{(7.60)(0.004)}{0.20} \quad v_{\min} = 0.15 \text{ ft/day}$$

Notes

- (1) Grumman Road Monofill Groundwater Monitoring Plan (SCS, 1999)

**Statistical Method Summary**

Statistical Method Summary		
Monitoring Well Network	Upgradient Wells	GWA-7 and GWA-8
	Downgradient Wells	GWC-1, GWC-2, GWB-4R, GWB-5R, GWB-6R, GWC-9, GWC-11, GWC-12, GWC-13, GWC-14, GWC-15, GWC-16, GWC-17, GWC-20, GWC-21, and GWC-22
CCR Monitoring Parameters	Appendix III (Detection Monitoring)	Boron, Calcium, Chloride, Fluoride, pH, Sulfate, and TDS
	Appendix IV (Assessment Monitoring)	Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, combined Radium 226 + 228, Fluoride, Lead, Lithium, Mercury, Molybdenum, Selenium, and Thallium
EPD Permit Metals	Appendix I (Detection Monitoring)	Antimony, Arsenic, Barium, Chromium, Lead, Selenium, Vanadium, and Zinc
	Appendix II (Assessment Monitoring)	Antimony, Arsenic, Barium, Chromium, Lead, Selenium, Vanadium, and Zinc
Statistical Methodology	Data Screening Proposed Background	Evaluate outliers, trends, and seasonality when sufficient data are available
	Statistical Limits	Interwell (calcium, chloride, fluoride, pH, and sulfate) or intrawell (boron, TDS, Appendix I and II) statistical limits are on constituent specific basis, depending on the appropriateness of the method as determined by the Analysis of Variance

## FIGURES

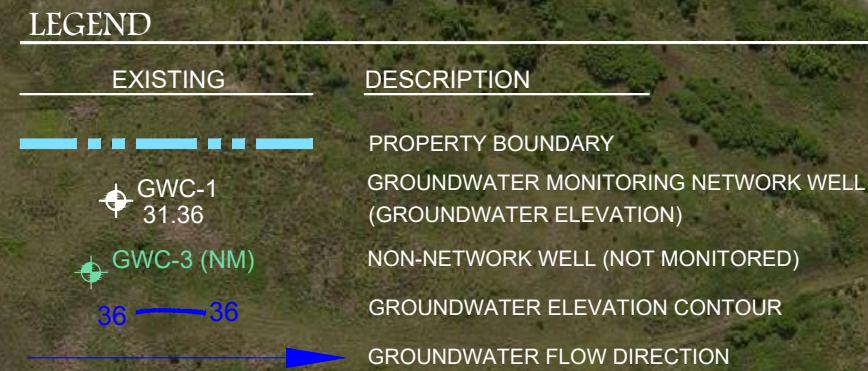

Monitoring Well ID	Well Depth (ft btoc)	Top of Casing (MSL)	Depth to Water (feet)	Groundwater Elevation (MSL)
GWA-7	21.2	47.10	7.37	39.73
GWA-8	20.8	46.84	8.81	38.03
GWB-4R	23.3	45.86	11.85	34.01

Atlanta, GA 30339

RE: Project: Plant Kraft - Grumman Road  
Pace Project No.: 2622501

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on August 28, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for  
Betsy McDaniel

## QUALIFIERS

Project: Plant Kraft - Grumman Road

Pace Project No.: 2622501

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Plant Kraft - Grumman Road  
Pace Project No.: 2622502

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on August 28, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

This revised report replaces the report issued on 9/9/2019. The report has been revised to correct the project-required RLs per consultant request. No other changes have been made to this report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for  
Betsy McDaniel

## QUALIFIERS

Project: Plant Kraft - Grumman Road

Pace Project No.: 2622502

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-GA Pace Analytical Services - Atlanta, GA

### ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

R1 RPD value was outside control limits.

RE: Project: Plant Kraft - Grumman Road  
Pace Project No.: 2622503

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on August 28, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel  
betsy.mcdaniel@pacelabs.com

## QUALIFIERS

Project: Plant Kraft - Grumman Road

Pace Project No.: 2622503

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### LABORATORIES

PASI-PA Pace Analytical Services - Greensburg

RE: Project: Plant Kraft - Grumman Road  
Pace Project No.: 2622578

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on August 29, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for  
Betsy McDaniel

## QUALIFIERS

Project: Plant Kraft - Grumman Road

Pace Project No.: 2622578

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

M1        Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6        Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Kraft - Grumman Road  
Pace Project No.: 2622579

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on August 29, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

This revised report replaces the report issued on 9/10/2019. The report has been revised to correct the project-required RLs per consultant request. No other changes have been made to this report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for

## REPORT OF LABORATORY ANALYSIS

## QUALIFIERS

Project: Plant Kraft - Grumman Road

Pace Project No.: 2622579

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-GA Pace Analytical Services - Atlanta, GA

### ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

RE: Project: Plant Kraft - Grumman Road  
Pace Project No.: 2622581

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on August 29, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel  
betsy.mcdaniel@pacelabs.com

## QUALIFIERS

Project: Plant Kraft - Grumman Road

Pace Project No.: 2622581

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

**LEVEL 2A LABORATORY DATA VALIDATIONS**

**Grumman Road**

**Scan Event**

**August 2019**

## **Georgia Power Company – Grumman Road**

### **Quality Control Review of Analytical Data – August 2019**

This narrative presents results of the Quality Control (QC) data review performed on analytical data submitted by Pace Analytical Services, Atlanta, Asheville, and Pittsburgh for groundwater samples collected at Grumman Road between August 26, 2019 and August 28, 2019. The chemical data were reviewed to identify quality issues which could affect the use of the data for decision-making purposes.

Information regarding the primary sample locations, analytical parameters, QC samples, sampling dates, and laboratory sample delivery group (SDG) designations is summarized in Table 1 of this Appendix. SDGs 2622502 and 2622579 were revised by the laboratory to correct the reporting limits (RLs) in accordance with project requirements.

In accordance with groundwater monitoring and corrective action procedures discussed in Title 40 CFR, Subpart D – Standards for the Disposal of Coal Combustion Residuals in Landfills and Surface Impoundments, the samples were analyzed for detected monitoring constituents listed in 40 CFR, Part 257, Appendix III and assessment monitoring constituents listed in 40 CFR, Part 257, Appendix IV. Test methods included Inductively Coupled Plasma – Mass Spectrometry (USEPA Method 6020B), Mercury in Liquid Wastes (USEPA Method 7470A), Determination of Inorganic Anions (USEPA Method 300.0), Solids in Water (Standard Methods 2540C), Radium-226 (USEPA 9315), and Radium-228 (USEPA Method 9320).

Data were reviewed in accordance with the US EPA Region IV Data Validation Standard Operating Procedures for Contract Laboratory Program Inorganic Data by Inductively Coupled Plasma – Atomic Emission Spectroscopy and Inductively Coupled Plasma – Mass Spectroscopy (September 2011, Rev. 2.0)<sup>1</sup> and the National Functional Guidelines for Inorganic Superfund Methods Data Review (January 2017)<sup>2</sup>. The review included an assessment of the results for completeness, precision (laboratory duplicate recoveries and matrix spike/matrix spike duplicate recoveries), accuracy (laboratory control samples and matrix spike samples), and blank contamination (field, equipment, and laboratory blanks). Sample receipt conditions, holding times, and chains of custody (COCs) were reviewed. Where there was a discrepancy between the QC criteria in the guidelines and the QC criterion established in the analytical methodology, method-specific criteria or professional judgment were used.

## DATA QUALITY OBJECTIVES

- Laboratory Precision:** Laboratory goals for precision were met, with the exception of Radium-226 on GWC-1 (2622503014) as described in the qualifications section below.
- Field Precision:** Field goals for precision were met, with the exception of Chromium on GWC-16 (2622579002) and DUP-2 (2622579001) as described in the qualifications section below.
- Accuracy:** Laboratory goals for accuracy were met.
- Detection Limits:** Project goals for detection limits were met. Certain samples were diluted due to the concentration of target or non-target analyte interferences. Dilutions do not require qualifications based on USEPA guidelines. RLs of non-detect compounds are elevated proportional to the dilution when undiluted sample results were not provided by the laboratory. The data usability of diluted results was evaluated by the data user in the context of site-wide characterization.
- Completeness:** There were no rejected analytical results for this event, resulting in a completion of 100%.
- Holding Times:** Holding time requirements were met.

## QUALIFICATIONS

In general, chemical results for the samples collected at the site were qualified on the basis of low precision or low accuracy or on the basis of professional judgment. The following definitions provide brief explanations of the qualifiers which may have been assigned to data by the laboratory during the validation process:

- J:** The analyte was positively identified above the method detection limit; however, the associated numerical value is the approximate concentration of the analyte in the sample
- ND:** The analyte was not detected above the method detection limit

The data generated as part of this sampling event met the QC criteria established in the respective analytical methods and data validation guidelines except as specified below. The

applied qualifications may not have been required for all samples collected at the site. A summary of sample qualifications can be found in Table 2 of this Appendix.

- Sample GWC-1 (262250314) was qualified as estimated (J) for Radium-226 as the laboratory relative percent difference (RPD) exceeded QC criteria (65.94% above limit of 25).
- Samples GWC-16 (2622579002) and DUP-2 (2622579001) were qualified as estimated (J) for Chromium as the field RPD exceeded QC criteria (121.4% above limit of 25).
- Certain chromium results in SDG 2622579 were qualified as non-detect (ND) due to the analyte being detected at a similar concentration in an associated blank sample. As shown in Table 2, the method detection limit (MDL) was raised to the sample result as part of the qualification process.
- Certain radium results in SDGs 2622503 and 2622581 were qualified as non-detect (ND) due to the analyte being detected at a similar concentration in an associated blank sample. As shown in Table 2, the minimum detectable concentration (MDC) was raised to the sample result as part of the qualification process

Atlantic Coast Consulting, Inc. reviewed the laboratory data from Grumman Road sampled between August 26, 2019 and August 28, 2019 in accordance with the analytical methods, the laboratory-specified QC criteria, and the guidelines. As described above, the results were acceptable for project use.

Company Name ACC  
Project Name Grumman Road  
Site Name Default Site  
Latitude 0° 0' 0"  
Longitude 0° 0' 0"  
Sonde SN 588863  
Turbidity Make/Model Hach 2100Q

Pump Information:

Pump Model/Type  
Tubing Type  
Tubing Diameter  
Tubing Length

Peri. Pump  
poly  
.17 in  
32 ft

Pump placement from TOC 25.7 ft

Well Information:

Well ID GWC-16  
Well diameter 2 in  
Well Total Depth 28.2 ft  
Screen Length 5 ft  
Depth to Water 20.7 ft

Pumping Information:

Final Pumping Rate 230 mL/min  
Total System Volume 0.2328295 L  
Calculated Sample Rate 300 sec  
Stabilization Drawdown 4 in  
Total Volume Pumped 18 L

RE: Project: Plant Kraft - Grumman Road  
Pace Project No.: 2624186

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on October 10, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for  
Betsy McDaniel

## QUALIFIERS

Project: Plant Kraft - Grumman Road

Pace Project No.: 2624186

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Plant Kraft - Grumman Road  
Pace Project No.: 2624187

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on October 10, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for  
Betsy McDaniel

## QUALIFIERS

Project: Plant Kraft - Grumman Road  
Pace Project No.: 2624187

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Kraft - Grumman Road  
Pace Project No.: 2624188

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on October 10, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel

## QUALIFIERS

Project: Plant Kraft - Grumman Road

Pace Project No.: 2624188

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### LABORATORIES

PASI-PA Pace Analytical Services - Greensburg

**October 2019**

## **Georgia Power Company – Grumman Road**

### **Quality Control Review of Analytical Data – October 2019**

This narrative presents results of the Quality Control (QC) data review performed on analytical data submitted by Pace Analytical Services, Atlanta and Pittsburgh for groundwater samples collected at Grumman Road between October 7, 2019 and October 9, 2019. The chemical data were reviewed to identify quality issues which could affect the use of the data for decision-making purposes.

Information regarding the primary sample locations, analytical parameters, QC samples, sampling dates, and laboratory sample delivery group (SDG) designations is summarized in Table 1 of this Appendix. SDG 2624187 was revised by the laboratory to add target analytes that were missing from the original report. Sample GWA-7 (2624188012) had limited sample volume for radium analysis; the radium-226 result may have a high bias.

In accordance with groundwater monitoring and corrective action procedures discussed in Title 40 CFR, Subpart D – Standards for the Disposal of Coal Combustion Residuals in Landfills and Surface Impoundments, the samples were analyzed for detected monitoring constituents listed in 40 CFR, Part 257, Appendix III and assessment monitoring constituents listed in 40 CFR, Part 257, Appendix IV. Test methods included Inductively Coupled Plasma – Mass Spectrometry (USEPA Method 6020B), Mercury in Liquid Wastes (USEPA Method 7470A), Determination of Inorganic Anions (USEPA Method 300.0), Solids in Water (Standard Methods 2540C), Radium-226 (USEPA 9315), and Radium-228 (USEPA Method 9320).

Data were reviewed in accordance with the US EPA Region IV Data Validation Standard Operating Procedures for Contract Laboratory Program Inorganic Data by Inductively Coupled Plasma – Atomic Emission Spectroscopy and Inductively Coupled Plasma – Mass Spectroscopy (September 2011, Rev. 2.0)<sup>1</sup> and the National Functional Guidelines for Inorganic Superfund Methods Data Review (January 2017)<sup>2</sup>. The review included an assessment of the results for completeness, precision (laboratory duplicate recoveries and matrix spike/matrix spike duplicate recoveries), accuracy (laboratory control samples and matrix spike samples), and blank contamination (field, equipment, and laboratory blanks). Sample receipt conditions, holding times, and chains of custody (COCs) were reviewed. Where there was a discrepancy between the QC criteria in the guidelines and the QC criterion established in the analytical methodology, method-specific criteria or professional judgment were used.

## DATA QUALITY OBJECTIVES

**Laboratory Precision:** Laboratory goals for precision were met, with the exceptions of Radium-226 on GWA-8 (2624188011) as described in the qualifications section below. Additionally, Radium-228 in SDG 2624188 yielded a relative percent difference (RPD) for the laboratory control sample/laboratory control sample duplicate that exceeded the QC criteria (53.11% above limit of 36). This batch was passed on the individual recoveries, and no batch qualification was necessary for Radium-228.

**Field Precision:** Field goals for precision were met, with the exception of Vanadium on GWC-12 (2624187016) and DUP-2 (2624187017) as described in the qualifications section below.

**Accuracy:** Laboratory goals for accuracy were met, with the exceptions of Boron, Calcium, and Chloride in SDG 2624187 as described in the qualifications section below.

**Detection Limits:** Project goals for detection limits were met. Certain samples were diluted due to the concentration of target or non-target analyte interferences. Dilutions do not require qualifications based on USEPA guidelines. Reporting limits (RLs) of non-detect compounds are elevated proportional to the dilution when undiluted sample results were not provided by the laboratory. The data usability of diluted results was evaluated by the data user in the context of site-wide characterization.

**Completeness:** There were no rejected analytical results for this event, resulting in a completion of 100%.

**Holding Times:** Holding time requirements were met.

## QUALIFICATIONS

In general, chemical results for the samples collected at the site were qualified on the basis of low precision or low accuracy or on the basis of professional judgment. The following definitions provide brief explanations of the qualifiers which may have been assigned to data by the laboratory during the validation process:

**J:** The analyte was positively identified above the method detection limit; however, the associated numerical value is the approximate concentration of the analyte in the sample

**ND:** The analyte was not detected above the method detection limit

The data generated as part of this sampling event met the QC criteria established in the respective analytical methods and data validation guidelines except as specified below. The applied qualifications may not have been required for all samples collected at the site. A summary of sample qualifications can be found in Table 2 of this Appendix.

- Sample GWC-14 (2624187006) was qualified as estimated (J) for Chloride as the associated matrix spike and matrix spike duplicate recoveries were below QC criteria (47% and 43% below the range of 90-110).
- Sample DUP-1 (2624187001) was qualified as estimated (J) for Boron and Calcium as the associated matrix spike and matrix spike duplicate recoveries were outside the QC criteria. The sample received 50-times dilution, which yielded spike recoveries that could not be evaluated.
- Sample GWB-5R (2624187021) was qualified as estimated (J) for Boron as the associated matrix spike duplicate recovery was below QC criteria (71% below the range of 75-125).
- Sample GWB-5R (2624187021) was qualified as estimated (J) for Calcium as the associated matrix spike recovery was above QC criteria (163% above the range of 75-125).
- Sample GWA-8 (2624188011) was qualified as estimated (J) for Radium-226 as the laboratory RPD exceeded QC criteria (27.58% above limit of 25).
- Samples GWC-12 (2624187016) and DUP-2 (2624187017) were qualified as estimated (J) for Vanadium as the field RPD exceeded QC criteria (71.8% above limit of 25).
- Certain chromium and/or zinc results in SDG 2624187 were qualified as non-detect (ND) due to the analyte being detected at a similar concentration in an associated blank sample. As shown in Table 2, when the original sample result was above the RL, both the RL and method detection limit (MDL) were raised to the sample result as part of the qualification process. When the original sample result was below the RL, only the MDL was raised to the sample result as part of the qualification process.

- Certain radium results in SDG 2624188 were qualified as non-detect (ND) due to the analyte being detected at a similar concentration in an associated blank sample. As shown in Table 2, the minimum detectable concentration (MDC) was raised to the sample result as part of the qualification process.

Atlantic Coast Consulting, Inc. reviewed the laboratory data from Grumman Road sampled between October 7, 2019 and October 9, 2019 in accordance with the analytical methods, the laboratory-specified QC criteria, and the guidelines. As described above, the results were acceptable for project use.

 Georgia Power Company – Grumman Road  
 Qualifier Summary Table – October 2019

SDG	Field Identification	Constituent	New RL	New MDL or MDC	Qualifier	Reason
24187	DUP-1	Boron			J	MS/MSD outside QC criteria
24187	DUP-1	Calcium			J	MS/MSD outside QC criteria
24187	GWC-16	Zinc	0.01	0.01	ND	Blank detection
24188	GWC-16	Radium-228		0.688	ND	Blank detection
24187	GWC-21	Zinc		0.0071	ND	Blank detection
24187	GWC-15	Zinc		0.0051	ND	Blank detection
24188	GWC-15	Radium-228		0.691	ND	Blank detection
24187	GWC-14	Zinc		0.0052	ND	Blank detection
24187	GWC-14	Chloride			J	MS/MSD below QC criteria
24187	GWB-4R	Zinc		0.0064	ND	Blank detection
24187	GWC-2	Zinc		0.005	ND	Blank detection
24187	GWC-20	Zinc		0.0049	ND	Blank detection
24187	GWA-8	Zinc		0.0077	ND	Blank detection
24188	GWA-8	Radium-226			J	RPD exceeds laboratory goal
24187	GWA-7	Zinc	0.095	0.095	ND	Blank detection
24188	GWA-7	Radium-226		0.298	ND	Blank detection
24188	GWC-13	Radium-226		0.273	ND	Blank detection
24187	GWC-11	Zinc		0.0061	ND	Blank detection
24188	GWC-11	Radium-226		0.235	ND	Blank detection
24187	GWC-12	Zinc		0.0057	ND	Blank detection
24187	GWC-12	Vanadium			J	RPD exceeds field goal
24187	DUP-2	Vanadium			J	RPD exceeds field goal
24187	GWC-17	Zinc	0.011	0.011	ND	Blank detection
24188	GWC-17	Radium-226		0.176	ND	Blank detection
24187	GWC-22	Zinc		0.0079	ND	Blank detection
24188	GWC-22	Radium-226		0.247	ND	Blank detection
24187	GWB-6R	Zinc		0.016	ND	Blank detection
24188	GWB-6R	Radium-226		0.221	ND	Blank detection

Abbreviations:

MDC – Minimum Detectable Concentration  
 MS/MSD – Matrix Spike / Matrix Spike Duplicate  
 MDL – Method Detection Limit  
 RL – Reporting Limit  
 RPD – Relative Percent Difference  
 SDG – Sample Delivery Group

Qualifiers:

J – Estimated Result  
 ND – Non-Detect Result

TABLE 2 (continued)  
 Georgia Power Company – Grumman Road  
 Qualifier Summary Table – October 2019

SDG	Field Identification	Constituent	New RL	New MDL or MDC	Qualifier	Reason
24187	GWB-5R	Boron			J	MSD below QC criteria
24187	GWB-5R	Calcium			J	MS above QC criteria
24187	GWB-5R	Chromium		0012	ND	Blank detection
24187	GWB-5R	Zinc		0.0081	ND	Blank detection
24188	GWB-5R	Radium-226		0.348	ND	Blank detection
24187	GWC-1	Chromium		0019	ND	Blank detection
24187	GWC-1	Zinc		0.0057	ND	Blank detection
24188	GWC-1	Radium-226		0.202	ND	Blank detection
24187	GWC-9	Chromium		0.009	ND	Blank detection
24187	GWC-9	Zinc		0.0054	ND	Blank detection
24188	GWC-9	Radium-226		0.294	ND	Blank detection

Abbreviations:

MDC – Minimum Detectable Concentration  
 MS/MSD – Matrix Spike / Matrix Spike Duplicate  
 MDL – Method Detection Limit  
 RL – Reporting Limit  
 RPD – Relative Percent Difference  
 SDG – Sample Delivery Group

Qualifiers:

J – Estimated Result  
 ND – Non-Detect Result

Product Name: Low-Flow System

Date: 2019-10-08 09:52:40

Project Information:

Operator Name H. Auld  
Company Name Atlantic Coast Consulting  
Project Name October Monitoring Event  
Site Name Grumman Road  
Latitude 0° 0' 0"  
Longitude 0° 0' 0"  
Sonde SN 369323  
Turbidity Make/Model Hach 2100Q

Pump Information:

Pump Model/Type Peri. Pump  
Tubing Type poly  
Tubing Diameter .17 in  
Tubing Length 21 ft

Pump placement from TOC 16.5 ft

Well Information:

Well ID GWA-7  
Well diameter 2 in  
Well Total Depth 21.10 ft  
Screen Length 5 ft  
Depth to Water 7.37 ft

Pumping Information:

Final Pumping Rate 220 mL/min  
Total System Volume 0.1837319 L  
Calculated Sample Rate 300 sec  
Stabilization Drawdown 5.2 in  
Total Volume Pumped 5.9 L

Low-Flow Sampling Stabilization Summary

 Site Name Grumman Road  
 Latitude 0° 0' 0"  
 Longitude 0° 0' 0"  
 Sonde SN 369323  
 Turbidity Make/Model Hach 2100Q

## Pump Information:

Pump Model/Type  
 Tubing Type  
 Tubing Diameter  
 Tubing Length

Peri. Pump  
 poly  
 .17 in  
 26 ft

Pump placement from TOC 23 ft

## Well Information:

Well ID GWC-9  
 Well diameter 2 in  
 Well Total Depth 25.7 ft  
 Screen Length 5 ft  
 Depth to Water 9.93 ft

## Pumping Information:

Final Pumping Rate 200 mL/min  
 Total System Volume 0.206049 L  
 Calculated Sample Rate 300 sec  
 Stabilization Drawdown 162.8 in  
 Total Volume Pumped 10.6 L

## Low-Flow Sampling Stabilization Summary

	Time	Elapsed	Temp C	pH	SpCond µS/cm	Turb NTU	DTW ft	RDO mg/L	ORP mV

## Grab Samples

Product Name: Low-Flow System

Date: 2019-10-09 13:20:38

Project Information:

Operator Name H. Auld  
Company Name Atlantic Coast Consulting  
Project Name October Monitoring Event  
Site Name Grumman Road  
Latitude 0° 0' 0"  
Longitude 0° 0' 0"  
Sonde SN 369323  
Turbidity Make/Model Hach 2100Q

Pump Information:

Pump Model/Type  
Tubing Type  
Tubing Diameter  
Tubing Length

Peri. Pump  
poly  
.17 in  
18.6 ft

Pump placement from TOC

16 ft

Well Information:

Well ID GWC-22  
Well diameter 2 in  
Well Total Depth 18.6 ft  
Screen Length 5 ft  
Depth to Water 9.74 ft

Pumping Information:

Final Pumping Rate 165 mL/min  
Total System Volume 0.1730197 L  
Calculated Sample Rate 300 sec  
Stabilization Drawdown 1.9 in  
Total Volume Pumped 5 L

## APPENDIX B

### Statistical Analyses

# 100% ND

Page 1

Date: 12/9/2019 3:36 PM

Grumman Road Landfill Client: Southern Company Data: Grumman Road

---

Antimony (mg/L)

GWC-1, GWC-12, GWC-15, GWC-17, GWC-2, GWC-21, GWB-6R

Arsenic (mg/L)

GWC-11, GWC-9

Beryllium (mg/L)

GWC-1, GWC-11, GWC-15, GWC-20, GWC-21, GWB-6R

Cadmium (mg/L)

GWC-12, GWC-13, GWC-15, GWC-16, GWC-17, GWC-2, GWC-20, GWC-21, GWC-9, GWB-5R, GWB-6R

Cobalt (mg/L)

GWC-1, GWC-13, GWC-15, GWC-16, GWC-20, GWC-21

Fluoride (mg/L)

GWC-11

Lithium (mg/L)

GWC-1, GWC-11, GWC-13, GWC-14, GWC-15, GWC-16, GWC-2, GWC-20, GWC-21, GWC-22, GWB-6R

Molybdenum (mg/L)

GWC-12, GWC-13, GWC-2, GWC-22, GWC-9

Selenium (mg/L)

GWC-13

Thallium (mg/L)

GWC-13, GWC-15, GWC-20, GWC-9, GWB-6R

Exceeds Limit: GWC-1, GWC-11, GWC-12, GWC-14, GWC-15, GWC-16, GWC-17, GWC-20, GWC-21, GBW-4R

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 22 background values. Annual per-constituent alpha = 0.09361. Individual comparison alpha = 0.003067 (1 of 2). Comparing 16 points to limit.

Exceeds Limit: GWC-17

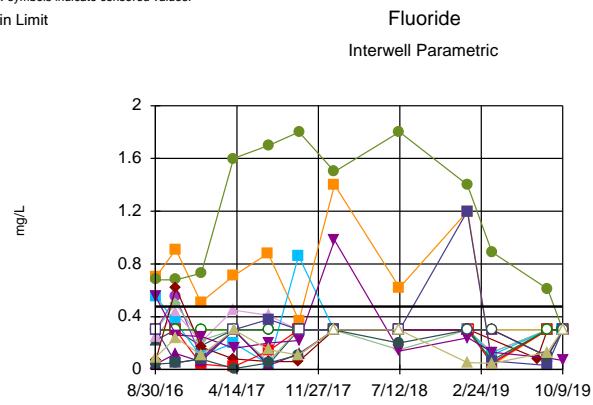

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 22 background values. Annual per-constituent alpha = 0.09361. Individual comparison alpha = 0.003067 (1 of 2). Comparing 16 points to limit.

Within Limit

Background Data Summary (after Kaplan-Meier Adjustment): Mean=0.1598, Std. Dev.=0.1359, n=24, 25% NDs.  
Normality test: Shapiro Wilk @alpha = 0.01, calculated = 0.9355, critical = 0.884. Kappa = 2.338 (c=7, w=16, 1 of 2, event alpha = 0.05132). Report alpha = 0.007498. Individual comparison alpha = 0.0004702. Comparing 16 points to limit.

Prediction Limit Analysis Run 12/10/2019 11:05 AM View: Appendix III Interwell PL  
Grumman Road Landfill Client: Southern Company Data: Grumman Road

Exceeds Limits: GWC-15, GWC-20

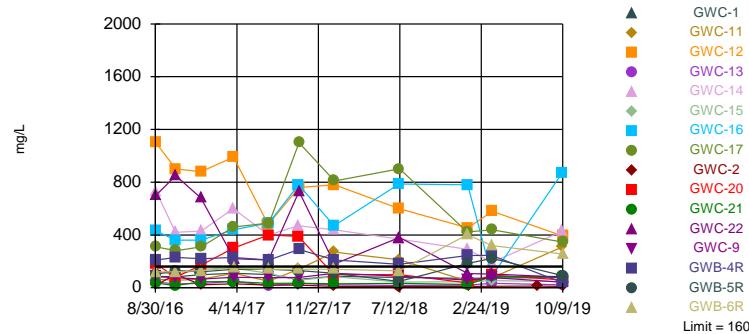

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 22 background values. Annual per-constituent alpha = 0.1872. Individual comparison alpha = 0.006133 (1 of 2). Comparing 16 points to limit.
