| Hardness | mg/L | | | | | | |

| | | Effluent Concentration ⁵ | | | | | Calculated Receiving Water Concentration ⁵ | | | | | Water Quality Criteria ⁶ | | |
|-----------------------|-------|-------------------------------------|--------------|--------------|--------------|--------------|---|--------------|--------------|--------------|--------------|-------------------------------------|--------------------|----------------------|
| Parameter | Units | Week 1 | Week 2 | Week 3 | Week 4 | Week 5 | Week 1 | Week 2 | Week 3 | Week 4 | Week 5 | | | |
| | | No discharge | No discharge | No discharge | No discharge | No discharge | No discharge | No discharge | No discharge | No discharge | No discharge | Average | Acute ⁷ | Chronic ⁷ |
| Arsenic | μg/L | | | | | | | | | | | | 340 | 150 |
| Cadmium | μg/L | | | | | | | | | | | | 0.94 | 0.43 |
| Chromium ⁸ | μg/L | | | | | | | | | | | | 16 | 11 |
| Copper | μg/L | | | | | | | | | | | | 7 | 5 |
| Lead | μg/L | | | | | | | | | | | | 30 | 1.2 |
| Nickel | μg/L | | | | | | | | | | | | 260 | 29 |
| Selenium ⁹ | μg/L | | | | | | | | | | | | *** | 5 |
| Zinc | μg/L | | | | | | | | | | | | 65 | 65 |
| Mercury | ng/L | | | | | | | | | | | | 1400 | 12 |

- 1 Tetra Tech verifies the correct laboratory analysis methods were used, any applicable permit limits have been met and other results are protective of Georgia EPD's water quality standards.
- Daily Min and Daily Max are the lowest and highest values for any day in the month. Daily Avg is the arithmetic average of all daily values during the entire month. ND = Not Detected (below the lab's reporting limit).
- Numeric Water Quality Criteria, which are also in the dissolved form. Consistent with Georgia EPD, non-detectable effluent concentrations are protective of the waterbody.

 Numeric Water Quality Criteria is the maximum concentration of a parameter (calculated at a default hardness of 50 mg/L as calcium carbonate) established for the receiving waterbody that will be protective of the designated use per Georgia EPD's rules and regulations. Calculated Receiving Water Concentrations less than these criteria are protective of the waterbody.

 Acute (short-term) water quality criterion to be compared with the weekly calculated receiving water concentration.

- Numeric water quality criterion shown is for Hexavalent Chromium.
 The numeric water quality criterion shown is the chronic (long-term) water quality criterion for selenium since this parameter does not have an acute (short-term) water quality criterion.

 **** = Not Applicable
- mg/L = milligrams per liter = parts per million; µg/L = micrograms per liter = parts per billion; ng/L = nanograms per liter = parts per trillion; SU = Standard Units; MGD = Million Gallons Day

- 1 Tetra Tech verifies the correct laboratory analysis methods were used.
- 2 Savannah River measured 1,000ft upstream and 1,000ft downstream of Outfall 01.
- 3 Metals results are total recoverable.
- 4 ND = Non-detect.
- *** = Not Applicable.

mg/L = milligrams per liter = parts per million; $\mu g/L = micrograms$ per liter = parts per billion; ng/L = micrograms per liter = parts per trillion; SU = Standard Units; MGD = Million Gallons Day
